

## CABRIODOC Liquid Vinyl

Tube 10 ml (~ 0.34 fl oz) sufficing for 25 cm (~ 10 in) long cut / seam

***One time use product! Shelf life 6 month after purchase!***

***Processing temperature 15-30 °C (59-86 °F)!***

### **Transparent Crystal Clear Glossy:**

DIY repair of all brand convertible soft top rear windows made of vinyl soft plastic (PVC).

### **Black, Dark Blue, Dark Brown and Universal Transparent Mat:**

DIY repair of all brand convertible car and boat soft tops made of vinyl soft plastic (PVC) or cloth, fabric, canvas, mohair. All brand car seats, boat seats, furniture seats + sofas, whirlpool (for example: SOFTUB pools) inner liner, skin made of artificial leather, vinyl and leathertext. Universal transparent mat for all colors. The original color shines through and makes the color effect.

***Not suitable for: glass windows, rubber, hard-plastic, hard vinyl, metal and genuine leather!***

Repairs tears, rips, punctures, cuts and cracks without using patches, glue or adhesive films.

Liquid Vinyl makes a durable and flexible connection with the original material. It is not a generic glue, cement glue or a solvent-synthetic resin adhesive product. It uses a unique formula without interfering substances like resin or silicone.

Liquid Vinyl is medium viscous and can be applied on sloping areas.

After a cure time of 12 hours it is like the original material resistant to water, alcohol, most solvents, fuels, oil, saltwater, UV curing and for temperatures of -40 to +120 °C (-40 to +248 °F).

### **Processing**

Clean and dry the hole soft top. Do not clean partial area. Do not use solvent based cleaners, acetone, paint thinners, gasoline (petrol) or bleaching agents. Use CABRIODOC Fabric-Cleaner-Concentrate or mild cleaner-soap for fabric tops. For vinyl tops use CABRIODOC Plastic-Cleaner-Concentrate or iso-propanol. Adhesives and sealants from prior trial repairs must be entirely removed! Liquid vinyl does not bond on proofed or protected fabric / canvas / mohair. Liquid Vinyl bonds only on clean genuine surfaces. Do not apply Liquid Vinyl on wet soft top.

- ***Do not touch or treat Liquid Vinyl until it is fully cured!***
- ***It is not possible to apply a graining on Liquid Vinyl!***
- ***Avoid excessive air movement or humidity!***

Apply Liquid Vinyl directly to the repair area allowing an extra 3-5 mm (~0.11 to 0.19 in) around the damaged area with a height of 1-2 mm (~ 0.04 to 0.08 in). Liquid vinyl shrinks about 80% after curing.

Wide cracks should be covered on the backside with paper masking tape. Do not use plastic tapes. Long and wide cracks can be pulled together step by step with masking tape. Apply Liquid Vinyl to the untaped areas and let it cure 6 hours. Remove tape and apply additional Liquid Vinyl to these areas to finish repair. You can also sew up the crack and embed the thread. Liquid vinyl can be applied in several layers wet-on-wet or fully cured.

Liquid Vinyl is touch dry in 3-6 hours and fully cured in 10-12 hours.

**Processing temperature 15-30 °C (59-86 °F). Store in dry rooms at temperature 0-30 °C (32-86 °F).**

Contains inflammable substances! Keep away from igniting sources and fire! Do not smoke! Irritate the eyes and the respiratory organs! Avoid contact with eyes and skin! Keep away from children!
